

The latest cold storage data remains supportive for meat prices, pointing to overall tight freezer supplies and the need on the part of end users to improve inventory positions ahead of the seasonal rebound in demand in the spring. Below is a brief recap of highlights for the top three proteins.

Beef: The total supply of beef in cold storage at the end of December was estimated at 503.8 million pounds, **6% lower than a year ago and 1.9% lower than the five year average.** We continued to see the seasonal improvement in freezer stocks that we see in November and December, just from a lower base. Inventories in December were 2.7% higher than the previous month compared to an average 1.9% increase in the last five years. Inventory of beef cuts was estimated at 39.4 million pounds, 7.8% higher than a year ago and 6.1% higher than the five year average. Faced with rising inflation, end users remain intent on having some product around them hence the larger inventories. Higher exports and a slowdown in exports to Asia has likely contributed to the increase in freezer stocks as well. Boneless beef inventory at the end of December was 464.3 million pounds, 7% lower than a year ago.

Pork: Pork supplies in the freezer remain tight, and combined with lower slaughter to start the year this continues to support pork cutout values. The inventory of all pork items in cold storage at the end of December was 493.9 million pounds, **4.1% lower than a year ago and 19.1% lower than the five year average.** December inventory declined 0.8% from the previous month compared to an average drawdown of 2.2% in the last five years. Ham inventories normally decline in December and that was the case this year. At the end of December ham inventory was estimated at 63.8 million pounds, 18.9% higher than last year but 12% below the five year average. Ham inventories declined 16.9% from the previous month compared to an average drawdown of 25% in the last five years. This was not a particularly positive number for hams but overall freezer stocks remain limited. Processors and packers likely used the price decline in December to bolster inventories. At the end of December the inventory of bellies in storage was 39.5 million pounds, 28.6% higher than a year ago and now back at the same level as the five year average. Seasonally we see belly inventories continue to increase in Q1 as processors prepare for spring/summer demand. It remains to be seen if that continued in January given the recent runup in belly prices. Inventory of pork loins in the freezer at the end of December was 39 million pounds, 5.7% lower than a year ago and 7.4% lower than the five year average.

Poultry: Chicken inventories continue to be tight, especially the inventory of chicken breasts. The supply of whole broilers was 12.2 million pounds, 15.5% lower than a year ago and 23.6% lower than the five year average. **The inventory of chicken boneless breasts was 152.6 million pounds, 41% lower than a year ago and 27% lower than the five year average.**
